

ABOUT EQUIP

Overview

EQulP (Enhancing Quality Assessment in International Partnerships) is a groundbreaking Erasmus+ project set to transform international collaborations in Higher Education. Through the creation of a cutting-edge quality assessment framework and an innovative EQulP Platform, the project empowers universities to conduct impactful evaluations of their international partnerships. Launching on November 1, 2025, this 35-month initiative promises to redefine excellence in international academic partnerships.

Project Aims

Enhancing Quality Assessment in International Partnerships (EQulP) project aims to:

- » standardize quality assessment frameworks,
- » enhance digital tools for quality assurance,
- » improve student and staff mobility outcomes,
- » strengthen collaboration between higher education institutions (HEIs) and policymakers,
- » support the implementation of EU education policies.

Expected Outcomes

At its core, EQulP will develop an innovative digital platform harnessing advanced analytics to provide real-time monitoring and evaluation of international partnerships. By seamlessly integrating data from diverse sources, including mobility data, university rankings, and research collaborations, this cutting-edge platform will empower International Relations Offices (IROs) to make well-informed decisions and optimize their institutions' international partnerships.

Through a series of pilot testing and comprehensive training activities, EQulP will actively engage a diverse array of stakeholders:

- » Higher Education Institutions: universities, colleges, and research institutions engaged in international partnerships by improving tools for monitoring and decision-making.
- » Academic and Administrative Staff: faculty members, program coordinators, and mobility officers managing exchange programs by providing training on quality assurance and assessment tools.
- » Policymakers and Government Authorities: Ministries of Education, European Commission representatives, and policymakers involved in Erasmus+ governance by offering data-driven insights to shape policies and improve funding allocation.

The scalable partnership model that will be developed within EQUiP will significantly enhance the quality and effectiveness of international collaborations in Higher Education.
