

# EQUIP PLATFORM

The EQuIP platform will provide insights from the analysis of various data sources, including mobility data, HEI rankings, and research collaboration insights to support quality assessment in international partnerships. The key innovative characteristic of the EQuIP Platform will be the automatic availability of the data, as it will make use of the available data to assess the partnerships without the need to upload and make the data analysis manually for the Institutions adopting it.

A pilot testing and training will be organized to gather user feedbacks.
